

Add Waypoint

[See Video Tutorial](#)

The simplest way to add a waypoint is to tap the map at the location where you want it, it is always better to zoom the map so you can find the precise location. Alternately you can add it by tapping on the Add Waypoints box in the planning screen, the following screen will be displayed:

You can type the address of the location in the text box and the closest matches will be displayed for selection.

Or you can press the “Choose on a map” button and the following screen will be displayed:

Move the map around until the marker is over the location you want and tap OK to add the waypoint
